

1/2 light-weight collection

I've created a collection of leight-weight space saving furniture.

Solution

The collection is made of leight-weight (waste) paper honeycomb board with HDF top. Once produced, they are fully replicable.

There are 5 main furniture and 2 additional types of cabinets for storage - all elements are compatible. So everyone can put together the furniture that he needs to be happy.

My concept is to achieve the maximum possible flexibility with a minimum of different furniture.

My floor plan is just one example - there are many possibilities to arrange the elements of my collection in the apartment (according to requirements and eligibility).

Paper honeycomb board:
Well known from boatbuilding leight-weight will be the future of cabinetry. The paper honeycomb panel or the simple, expanded honeycomb is an innovative
