

1/2 BrighterBox House

BrighterBox House - A house concept for homeless people

Solution

The main goal is to bring affordable housing to homeless and poor people. The most important is to achieve that under the \$ 300 budget. No luxury will be made but a proper house to live does not necessary mean space and fancy objects.

The BrighterBox will bring a roof to poor people but more important than that is the process of involving them into building their homes and putting their tastes on it. The idea of colors is essential to bring them a brighter future.

The structure is very simple, wood columns with OSB.
