

1/2 A poverist dwelling for poor people

Starting from the basis of the primitive hut and using local materials, I have created a spatial and structural prototype of dwelling that responds to the present needs of the poor people in the world, with a local study of Romania's rural society.

A p o v e r i s t d w e l l i n g f o r p o o r p e o p l e

Solution

By studying the main needs of the poor rural society from Romania's villages and the main features of the traditional dwelling, I have created a prototype of space and structure that uses local materials and low technologies, creating a replicable, low cost and sustainable model of housing, based on the twisted metaphor of the primitive hut. The total cost of my design proposal is up to 300 \$ and can become a prototype of dwelling all over the world.

2/2

A poverist dwelling for poor people

Starting from the basis of the primitive hut and using local materials, I have created a spatial and structural prototype of dwelling that responds to the present needs of the poor people in the world, with a local study of Romania's rural society.
