

1/2 **PLATANHOUSE**

A house is not necessarily a home, does not always come to represent a special place for the user, not always provide a safe place to live. In marginal neighborhoods and communities, there are hundreds and thousands of houses, houses in deplorable condition

yagua used as exterior walls

Solution

The banana is a mass consumed musacea in the tropics, which abound in poor communities, including our country. That's why we take it as an essential element of construction, to the point of calling the house PLATANHOUSE. In the process of consumption of banana, we waste a lot of things, which can be used to solve problems such as fuel for cooking or in this case, the construction of a home. PLATANHOUSE design was developed with a basic outline for it to be easily developed by users themselves, who would be in the process, connected to their future home, and raise their self esteem and confidence.

PLATANHOUSE consists of several elements: stone foundation, bearing walls and columns made of

coconut wood framing, wrapped in chicken wire, and filled with adobe and cement mixture of clay and
