

1/2 **chameleon**

The interior of the restaurant adapts to changing environment in the same way as the chameleon changes its color depending on its mood.

**Solution**

Chameleon is a design of a dynamic interior which adapts to changing environment and can serve various purposes.

The interior of the restaurant adapts to changing environment in the same way as the chameleon changes its color depending on its mood. The created space of the restaurant constantly resorts to mimicry and adaptation. Certain systems are subject to change:

1. spatial system (volumes, lines, objects)
2. lighting (natural light, artificial light, shadows)
3. atmosphere (fire, water, scents, plants)
4. materials (color, texture, patterns)
5. sounds (music, other sounds)
6. virtual system (digital menu, video, automatic control)

Each of these systems changes in order to alter the overall

atmosphere for breakfast, lunch, dinner or special occasions, such as private dinner, banquet, business

2/2

## chameleon

The interior of the restaurant adapts to changing environment in the same way as the chameleon changes its color depending on its mood.
