

1/2 BEWARE OF MALICIOUS RAID

KEEP YOUR DATA SAFE

Solution

The dog signifies loyalty, security and friendliness. He always keeps his things (e.g. bones) safe and away from his rivals or other he considers disturbing. And he also protects his owner from danger. Dog keeps and secures his territory as well. This is similar to what ISR G2 offers, it commits security, simplicity (user friendly), and close to the customers than ever. The viruses or malwares are everywhere; the customers should keep their data from the attack, so they should choose the right product, which is the new CISCO ISR G2.
