

1/2 iQua Water Management Software

A software application that makes use of the latest technology to monitor, advise upon and reduce water usage.

The image shows a tablet displaying the iQua Water Management software interface. Two blue arrows point from the tablet to two different images. The left image shows a scenic lake with mountains in the background, with the text 'we are meeting targets for water conservation' below it. The right image shows a cracked, dry earth surface, with the text 'we are not meeting targets for water conservation' below it. The iQua Water Management logo is visible in the bottom right corner of the slide.

iQua
WATER MANAGEMENT

Solution

The first step in managing water usage is an effective monitoring system to identify problem areas.

iQua is a solution for large/medium sized buildings, that presents data to an assigned water management officer(s) within an organisation. It also gives information to staff regarding water usage and sets targets for reducing water use.

The system uses wireless water meters (already available) to transmit data directly to a network. It can pick up trends over a set period of time, and even alert operators when taps have been left on!

More to follow!
