

1/2 NEW CASSETTE

a new viable option for reducing water consumption in all public bathrooms: schools, factories, offices, hospitals, etc. ...

NEW CASSETTE TOILET DRAIN

When push comes a dose of foam hand sanitizer

Solution

an economic system that can be used both in new construction and in existing ones. The use of hand sanitizer instead of water is safe: these types of disinfectants come already used in hospitals by surgeons before an operation and by hospital staff in general. In this way we can be sure that everyone has clean hands after using the bathroom and we will have a considerable saving of water.
