

1/2 stop use water tap

control water flow means control the waste of water

Solution

use pedal is more controlable , to free your hands while using water, the pedal is more workable for human . you can imagine the concept of a car pedal

advanced :

cloud it ??

typically all peopoles have a cell phone , the cell phone can be used to identify the water consumer ,

we will use hybrid source positioning mechanism to determin the exact postion of the water consumer like GPS , wifi hotspot , cell tower

When a water user enter into a spotted area like bath then : the software calculates the exact position of the user. so we get the bath occupied . or other water

source is in use now

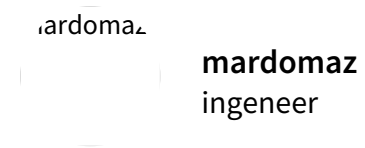

the software communicate with the

2/2

stop use water tap

control water flow means control the waste of water
