

1/2 Save Water & Make Art

Save Water & Make Art

Unlimited possibilities for artistic construction and decoration the products. It will also induce a strong social impact.

Solution

Collect rain water into tanks inside or outside the building and simultaneously use those equipments as notable part of building's interior/exterior.

It is used the standart principle to collect rainwater: Gather rainwater, filtering it, then store it in reservoirs and utilize it for toilets and watering planted areas etc. But instead of putting water tanks underneath the surface, we will install big glass containers in various places around the public facilities. They can be implemented as stand alone columns, to be embedded in walls or simply installed next to a wall inside or outside the building. Those tanks could have decorations of light effects, bubbles, diversity of metal, glass or plastic elements, so put together and used in different combinations to form artistic and innovative solutions.

Main advantages:

1. Piece of art: design of the tank can be done in really beautiful,
