

1/2 **B4-B6**

A simple idea, formed by extruding a single panel

Solution

The update: why try to fix what is not broke ... but we can improve it! only a few small changes can sometimes be huge! .. walls a little thicker and more rounded edges, a more comfortable grip, structural improvements, and the same stability and simplicity of the B4 and B6!

A simple idea, formed by extruding a single panel. easy to do in my opinion, with many alternate uses, wine bottle holders, magazine rack, shoe organizer, and more.

4 presentations, red: 4 and 6 bottles and white: 4 to 6 bottles, with handles, which allow up two, at the same time

material: plastic biodegradable (PLA) produced from starch (found in

vegetables such as potatoes and corn) converted to lactic acid which is the basis for the creation

2/2
