PODIFY: Tablet. Brooklyn Bridge

In between city and infrastructure,  
150 feet in the air.

**Solution**

Creating connections to public space

Over 120,000 vehicles, 4,000 pedestrians, and 2,600 cyclists a day pass across the Brooklyn Bridge.

Making use of public space for social interaction, the project reprograms the existing one dimensional circulation space into a place to view, reflect, meet, and collaborate, publicly and privately.

Tablet. Brooklyn Bridge

The hotel turns the icon into a physical, spatial, and public connection center by attaching a multi-functional complex to the side of the Brooklyn Bridge - bringing together tourists, visitors, and locals to one of New York's biggest, busiest, and iconic structures.

The Tablet Hotel becomes a public landmark.
