

1/5 **LINEA**

Linea is a chair and a table that can be folded and stacked for the transport with simple movements

**Solution**

Linea is a system design for outdoor use. It is composed by a chair and a table that can be folded and moved easily. The idea was born thinking about the classical and historical chairs for outdoor, like Franco Albini's Primavera, designed for Vittorio Bonacina. I want to recreate the effect of the rush weaved without weaving material but overlapping steel stripes. The chair and the table both foled in similar way, with rails obtained from a cut in the strucutre. This make Linea easy to fold and moved away with simple and quick movement. The chair and the table both are in lacquered steel.

## LINEA

Linea is a chair and a table that can be folded and stacked for the transport with simple movements

How does your idea solve the problem?

I design an easy folding system integrated in the structure of the chair and of the table. I didn't use rails in market but i integrated it into the main structure. The shape is designed for being stacked in a simple way saving space during the transport.
