Solution

Electric car supercharging.
The electrical car market will grow fast in the near future and many customers will switch their cars from petrol to electrical. That's why it is smart to get a position in this market either by developing Total own charging service or collaborate with companies selling el.cars in Germany for offering a complex service. This will attract customers who don't depend on buying gas and petrol products and they can also be customers of the Cafe&restaurant zone where they can enjoy their drinks or meals while waiting for their car to charge.

What design style are you choosing for your service station and why?

Modern architecture using T-air concept and color scheme. The roof design respects the T-air concept pattern, colors and transparency. This way the new gas station fulfills the company's strategy for rebranding and at the same time attracts attention and can be used as object of recognition for the public and the media. The interior is clean and modern with living plants wall, warm earthlike floor, warm beige and clean white elements.
