

1/2 **Heat Bihar**

Heat in Bihar

The Solar Concentrators Shall use solar energy to heat up the water up to a temperature good enough to break the hydrogen & oxygen which can be transferred into the Hydrogen Fuel Cell & keeping the cell as a reservoir of energy

The Fuel Cell can later be taken to the fields & power the water pumps to supply water to the fields

On discharging, these batteries can be exchanged with the recharged Fuel Cell

**Solution**

This system will use the heat coming off the Sun & concentrate it on a source simply to charge the Hydrogen Fuel Cell which shall be later used on the fields of Bihar to energize the water pumps & once done shall be back at the charging station to recharge the cell via the renewable source Sun
