BVK42 - BONAVERDE KAFFEEMASCHINE

Solution

i hope the renderings are okay to picture the functions.

but i would like to make the mechanism of the drawers for the air-filter

and the one for the silver chaffs more clearly to you...

simply push on the logos and then they open up automatically.

the same procedure works for the water-tank.

push the symbol and the tank opens up to unload manually.

the drop-stop is solved with a passive magnet that is integrated into

the top of the can and a valve inside the filter.

the cover of the bean-chamber could be transparent and constructed
