

## 1/2 Efficient&Effective

Read description please.

### Solution

Main features:

- Rotating body to have complete access to all the parts. In other designs you have to move the whole device in order to have access to the air filter or water tank
- The heating unit is also use to heat the induction surface where the carafe is placed. To keep the coffee warm.
- Silver chaffs fall to the coffee filter chamber (yet they dont mix with it) therefore when changing the filter you get rid of the chaffs as well. No need to have a different chamber and procedure to do this.
- Water tank is never moved. Therefore we avoid the issues of connection with the pipes (how will you connect the water tank to its pipe without dropping water or so?)
- See through water tank, to clearly see how much water it has.
