

1/2 Sub Surface Drip Irrigation coupled with rain harvesting

To makes the system water efficient & irrigate it with the available rain water

Source: Agricultural Research Service

Solution

The key benefit of a surface micro-irrigation system is to apply low volumes of water and nutrients uniformly to every plant across the entire field. SDI delivers many advantages beyond surface irrigation. SUBSURFACE DRIP IRRIGATION

THE NETAFIM ADVANTAGE

Netafim USA offers the widest selection of subsurface drip irrigation products and superior system accessories available in the industry. Designed to work together, a complete system from Netafim USA is made of top-quality products, ensuring a successful SDI system.

WATER MOVEMENT IN SDI SYSTEMS

When applied slowly to the soil at a single

point, water moves through the soil in two

ways: 1) downward pulled by gravity and

2) outward and upward, pulled by

capillary action.
