

## 1/2 Apartment Building with an Integrated Green Zone

Apartment Building with an Integrated Green Zone and an Underground Parking

### Solution

A lot of modern cities are overloaded with Concrete, Metal and Glass. The demographic number is growing and so do the number of the new buildings, but not always near a new concrete building we can see a nice and green park.

I intended to realize a building which will restore the green area that was destroyed to build a new Apartment Block. This spaces can be used by all the residents, in any time for establish new social relationships or simply to relax after a long working day.
