What was the task for the work you show here?

We design and model the portal prototype. The video is a 3D models animation. The art direction belongs entirely to ZoneCreative.

International Architecture Competition

What was your unique idea?

The project would be an alternative to traditional frame systems for a new living spaces concept. The process is based on square portals made of recycled plastic material ables to slide vertically on tracks to form places above and under water. The section is designed to ensure both ultimate tensile strength and buoyancy. The construction could be realized on water with wall-building technique without cement.
