Wall clock showing time by LED light

Solution

Design of this clock is very simple. Circular shape of this clock follows the classic form of traditional clocks, but what puts this clock in modern design, in design of future, is the light that plays by his given function, pointers. On the outside of the clock light shows hours, on the inside of the clock the minutes, and in the middle of clock's housing light indicates seconds. The clock consists of three parts: the plastic case, L.E.D. lights and small electronic timer.
