

1/7 **LinzBRDG**

Defragmented iconic bridge structure creates responsive urban space system at the harbour.

Solution

By LinzBRDG the old iconic beauty is conserved in defragmented pieces that settled in a basic public space system at the harbour. The old structures create a basic frame for diverse urban issues connected to the imagined public space. All the additional accessories are defined by users creating an active and responsive system according to local directives. The old industrial structure becomes a colourful urban space and the original geometry reveals again from special viewpoint.
