

1/6 **Lunch is where you are!**

Places designed by users and experts supplied with food by robots and drones.

**CORPORATE CAMPUS SUPPLIED BY DRONES**

We offer the place and food you enjoy the most!  
Just sit down, order wait the drone to deliver to your favourite spot, enjoy!

**Solution**

A large corporate campus offers the possibility to give everyone the space he needs and the social interaction he prefers. With drones the whole campus could provided with food. Places could be designed by users for example: someone finds a nice spot he puts up a chair and a small table takes a picture and loads it up on the app where you order food (there is although the possibility to share nice spots included) someone else if he likes the pictures could try this spot next lunch.

## Lunch is where you are!

Places designed by users and experts supplied with food by robots and drones.

Which target group is your concept for?

Everyone!

3/6

## Lunch is where you are!

Places designed by users and experts supplied with food by robots and drones.

How does digitization & connectivity create a unique eating experience?

Through this specific combination of digitization & connectivity (robot+drone+userkit+app/computer) the user can experience food brought to places he couldn't imagine before. Moreover he can become the designer himself. To me creating is always a unique experience.

What other amazing features does your concept offer?

Through the permanent user influence on the campus it will become alive and develops itself through the users always in new directions therefore the user will experience many many exiting situations.

## Lunch is where you are!

What is the core idea behind your campus food experience?

To have a fixed place like a good designed canteen and extend there reach of services through technology and digitization. More concrete: To offer through an combination of an robot including drones with an interface to the user via app/computer user and predesigned places. E.g. places: outside in nature / near the office and production buildings / inside the building itself.
