We care for the caregiver.

DAX
Philippines

1. What situation and/or problem was the caregiver facing?
Mental health issues like depression, anxiety, sadness, worry
Physical health issue like lack of exercise.
Lack of medical knowledge information.
Drug calculation and purchasing.
Repetitive charting routine.

2. How does your idea help to solve it?
My work/app gives a lot of options to choose from. From the options in the app, almost everything in it can help caregivers in every situation. They can switch their mood easily, they can have an instant assistant, and they can be effective caregivers in every step of their job.

3. What are the unique aspects of your idea?:
What sets my idea apart from others is that it's not boring. It touches the physical, emotional and mental issues. It gives you a friend during night shifts, an assistant that never complains and a partner that helps you to be best that you can be as a caregiver. It is more than a companion than an app.

Solution
This app has pharmaceutical tab for medication management support, ADL tab for patients daily living, pocket drug reference for a list of drug information, step counter tab for caregivers fitness, coloring page and guided meditation audio to de-stress, and video lectures for added information

Care giving application that will aid them from day to day.

Describe a caregiver situation that you were/are involved in.

My mother had been sick for two years, and I have been involved in her daily activities. My major problem is worry, stress and my health. I had no time to exercise, and look after myself. Everyday I do meditation and it really helps me. I bought a pedometer to at least monitor my steps. Do coloring to focus and keep calm. This app is an inspiration and will surely help care givers around the world.
