

1/2 **CLOTH RECOGNITION - WIP**

Solution

The on board CLOTH RECOGNITION CAMERA analyses the clothes inside the washing machine by the type of fabric and color, automatizing the washing program selection.

HOW DOES IT WORK: The user adds the clothes one by one inside the washing machine so the camera can analyze each individual clothing item. **//// FAIL SAFE:** In case you are in a hurry and you add more than one item at a time, after you press start and before water is added, the machine rotates the clothes a few times in order to separate and see all items inside.

The on board **CLOTH RECOGNITION CAMERA** analyzes the clothes inside the washing machine by the type of fabric and color, automatizing the washing program selection.
