

1/2 Water is life...so, stretch it to the max! (wip, collaborators welcome)

Smart clotheswasher that interacts with a water salvage & storage system and a dishwasher. Saves H2O

Solution

DETAILS. In addition to the slide...

1. A retrofit system that channels, treats and stores water exiting the clothes washer (any other brand, too) and makes that water available for subsequent steps in washing clothes *AND/OR* even washing dishes, i.e. water sent to other appliances. Note that hookup to a dishwasher is not compulsory, its just an option.
2. Water filtration and cleanup, especially removal of suspended dirt and/or undesirable materials, can be achieved by existing wastewater treatment technologies. For example, anti-flocculant technology, selective absorption technology that removes dirt and undesirable chemicals (but not the detergent that can thereafter be reused for
