SILK CHAIR

Enjoy your coffee cup in 100% recycled aluminium chair

The screenshot shows a CAD software interface. On the right side, there is a metadata panel with the following fields:

- TÍTULO
- N.º DE PIEZA
- REVISIÓN
- DISEÑADOR
- INGENIERO
- NOTAS

Below these fields is a large empty text area for notes. At the bottom of the interface, there is a horizontal bar with a left-pointing arrow on the left and a right-pointing arrow on the right. Below the right-pointing arrow is a small text block:

Solution

The silk chair is an iconic design inspired by the movement of the silk fabric, its organic form evokes modernism, it is a chair with a short back, for use in short periods of time, it is stacked for use in air cafes free. Manufacturing is planned in industrial casting methods, and the finishing requires polishing and coating in industrial lacquer, to reduce defects inherent in recycled aluminum smelts, also the paint avoids the oxidation effects of aluminum.

Why is secondary aluminum the perfect material for your idea?

The chair is designed to be manufactured in the process of casting, which helps to use the recycled material directly, without the need to convert it into an intermediate product such as a sheet or an ingot, reducing the environmental impact in fuel use to transport the material in process.
