Application for education of girls' health, especially concerning reproductive health matters

Target group

Change makers

Observation

Differences in rates of utilization of services (possible due to reproductive health) according to gender are well recognized as one of the predisposing factors for utilization. Gender affects both the patient and the provider and is related to socioeconomic status, cultural factors and education.

Conclusion

Specific gender-related issues in the Arab region include: improving women's access to health care, education and literacy for girls and women, employment and social protection for women and female genital mutilation.

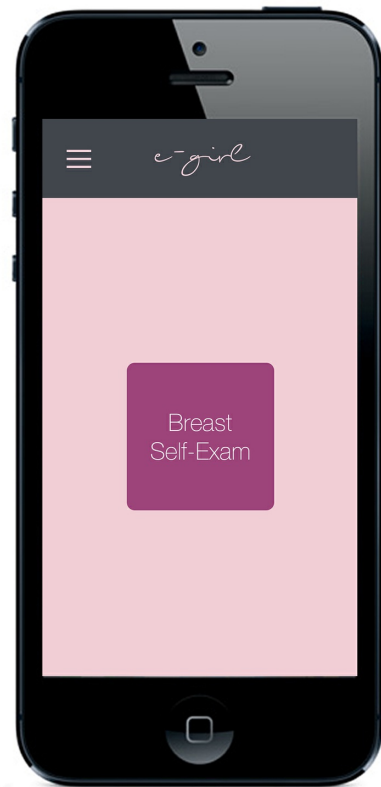

Solution

1. Application:
2. improving women's access to health care
